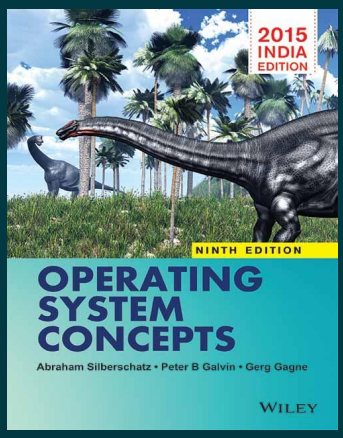
WILEY



Operating System Concepts, 9ed, ISV

By Abraham Silberschatz, Peter B. Galvin, Gerg Gagne

Paperback 9788126554270 ₹- *Price*

Description

The ninth edition of Operating System Concepts continues to evolve to provide a solid theoretical foundation for understanding operating systems. This edition has been updated with more extensive coverage of the most current topics and applications, improved conceptual coverage and additional content to bridge the gap between concepts and actual implementations. A new design allows for easier navigation and enhances reader motivation. Additional end-of-chapter, exercises, review questions and programming exercises help to further reinforce important concepts. WileyPLUS, including a test bank, self-check exercises and a student solutions manual, is also part of the comprehensive support package.

About the Author

Abraham Silberschatz, Peter B. Galvin, Gerg Gagne

Abraham Silberschatz is the Sidney J. Weinberg Professor and Chair of Computer Science at Yale University. Prior to joining Yale

Table of Contents

Part One Overview

Chapter 1 Introduction

1.1 What Operating Systems Do

1.2 Computer-System Organization

1.3 Computer-System Architecture

1.4 Operating-System Structure

1.5 Operating-System Operations

1.6 Process Management

1.7 Memory Management

1.8 Storage Management

1.9 Protection and Security

1.10 Kernel Data Structures

1.11 Computing Environments

1.12 Open-Source Operating Systems

1.13 Summary

Chapter 2 System Structures
2.1 Operating-System Services
2.2 User and Operating-System Interface
2.3 System Calls
2.4 Types of System Calls
2.5 System Programs
2.6 Operating-System Design and Implementation
2.7 Operating-System Structure
2.8 Operating-System Debugging
2.9 Operating-System Generation
2.10 System Boot
2.11 Summary
Part Two Process Management
Chapter 3 Process Concept
3.1 Process Concept
3.2 Process Scheduling
3.3 Operations on Processes
3.4 Interprocess Communication
3.5 Examples of IPC Systems
3.6 Communication in Client--Server Systems
3.7 Summary
Chapter 4 Multithreaded Programming
4.1 Overview
4.2 Multicore Programming
4.3 Multithreading Models
4.4 Thread Libraries
4.5 Implicit Threading
4.6 Threading Issues
4.7 Operating-System Examples
4.8 Summary
Chapter 5 Process Scheduling
5.1 Basic Concepts
5.2 Scheduling Criteria
5.3 Scheduling Algorithms
5.4 Thread Scheduling
5.5 Multiple-Processor Scheduling
5.6 Real-Time CPU Scheduling
5.7 Operating-System Examples

5.8 Algorithm Evaluation
5.9 Summary
Chapter 6 Synchronization
6.1 Background
6.2 The Critical-Section Problem
6.3 Peterson's Solution
6.4 Synchronization Hardware
6.5 Mutex Locks
6.6 Semaphores
6.7 Classic Problems of Synchronization
6.8 Monitors
6.9 Synchronization Examples
6.10 Alternative Approaches
6.11 Summary
Chapter 7 Deadlocks
7.1 System Model
7.2 Deadlock Characterization
7.3 Methods for Handling Deadlocks
7.4 Deadlock Prevention
7.5 Deadlock Avoidance
7.6 Deadlock Detection
7.7 Recovery from Deadlock
7.8 Summary
Part Three Memory Management
Chapter 8 Memory-Management Strategies
8.1 Background
8.2 Swapping
8.3 Contiguous Memory Allocation
8.4 Segmentation
8.5 Paging
8.6 Structure of the Page Table
8.7 Example: Intel 32 and 64-bit Architectures
8.8 Example: ARM Architecture
8.9 Summary
Chapter 9 Virtual-Memory Management
9.1 Background
9.2 Demand Paging
9.3 Copy-on-Write

9.4 Page Replacement
9.5 Allocation of Frames
9.6 Thrashing
9.7 Memory-Mapped Files
9.8 Allocating Kernel Memory
9.9 Other Considerations
9.10 Operating-System Examples
9.11 Summary
Part Four Storage Management
Chapter 10 File System
10.1 File Concept
10.2 Access Methods
10.3 Directory and Disk Structure
10.4 File-System Mounting
10.5 File Sharing
10.6 Protection
10.7 Summary
Chapter 11 Implementing File-Systems
11.1 File-System Structure
11.2 File-System Implementation
11.3 Directory Implementation
11.4 Allocation Methods
11.5 Free-Space Management
11.6 Efficiency and Performance
11.7 Recovery
11.8 NFS 523
11.9 Example: The WAFL File System
11.10 Summary
Chapter 12 Mass-Storage Structure
12.1 Overview of Mass-Storage Structure
12.2 Disk Structure
12.3 Disk Attachment
12.4 Disk Scheduling
12.5 Disk Management
12.6 Swap-Space Management
12.7 RAID Structure
12.8 Stable-Storage Implementation
12.9 Summary

Chapter 13 I/O Systems
13.1 Overview
13.2 I/O Hardware
13.3 Application I/O Interface
13.4 Kernel I/O Subsystem
13.5 Transforming I/O Requests to Hardware Operations
13.6 STREAMS
13.7 Performance
13.8 Summary
Part Five Protection and Security
Chapter 14 System Protection
14.1 Goals of Protection
14.2 Principles of Protection
14.3 Domain of Protection
14.4 Access Matrix
14.5 Implementation of the Access Matrix
14.6 Access Control
14.7 Revocation of Access Rights
14.8 Capability-Based Systems
14.9 Language-Based Protection
14.10 Summary
Chapter 15 System Security
15.1 The Security Problem
15.2 Program Threats
15.3 System and Network Threats
15.4 Cryptography as a Security Tool
15.5 User Authentication
15.6 Implementing Security Defenses
15.7 Firewalling to Protect Systems and Networks
15.8 Computer-Security Classifications
15.9 An Example: Windows 7
15.10 Summary
Part Six Case Studies
Chapter 16 The Linux System
16.1 Linux History
16.2 Design Principles
16.3 Kernel Modules
16.4 Process Management

16.5 Scheduling
16.6 Memory Management
16.7 File Systems
16.8 Input and Output
16.9 Interprocess Communication
16.10 Network Structure
16.11 Security
16.12 Summary
Chapter 17 Windows 7
17.1 History
17.2 Design Principles
17.3 System Components
17.4 Terminal Services and Fast User Switching
17.5 File System
17.6 Networking
17.7 Programmer Interface
17.8 Summary
Chapter 18 Influential Operating Systems
18.1 Feature Migration
18.2 Early Systems
18.3 Atlas
18.4 XDS-940
18.5 THE
18.6 RC 4000
18.7 CTSS
18.8 MULTICS
18.9 IBM OS/360
18.10 TOPS-20
18.11 CP/M and MS/DOS
18.12 Macintosh Operating System and Windows
18.13 Mach
18.14 Other Systems
Exercises
Bibliographical Notes
Appendices (Online)
Appendix A BSD UNIX
A.1 UNIX History
A.2 Design Principles

A.3 Programmer Interface
A.4 User Interface
A.5 Process Management
A.6 Memory Management
A.7 File System
A.8 I/O System
A.9 Interprocess Communication
A.10 Summary
Appendix B The Mach System
B.1 History of the Mach System
B.2 Design Principles
B.3 System Components
B.4 Process Management
B.5 Interprocess Communication
B.6 Memory Management
B.7 Programmer Interface
B.8 Summary
Exercises
Bibliographical Notes
