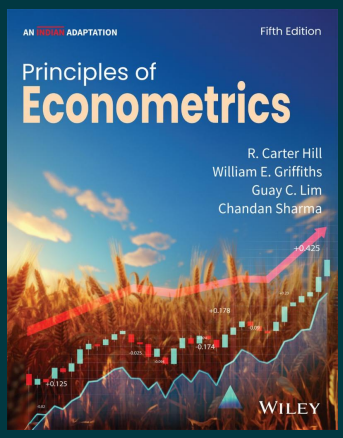
WILEY



Principles of Econometrics, 5ed, An Indian Adaptation

By R. Carter Hill, William E. Griffiths, Guay C. Lim, Chandan Sharma

Paperback 9789363865778 ₹1,129.00

Pages: 668

Description

Principles of Econometrics, Fifth Edition, is a comprehensive book tailored for undergraduate and postgraduate students in the fields of economics, commerce, business, statistics, and management. This edition equips students with a practical understanding of basic econometrics, enabling them to apply modeling, estimation, inference, and forecasting techniques to real-world economic issues. Additionally, readers will develop the ability to critically evaluate the findings of others' economic research and models, laying a solid foundation for advanced study in the field.

This Indian adaptation introduces new sections focusing on the Indian economic context, such as monetary policy, inequality of opportunity, and public health expenditure. Significant additions also include analyses of per-capita expenditure, private returns to education, and the impact of financial constraints on innovation in developing economies.

About the Author

R. Carter Hill, William E. Griffiths, Guay C. Lim, Chandan Sharma

R. Carter Hill is an Emeritus Professor of Econometrics at Louisiana State University (LSU). He has been a part of LSU since 1985, after teaching at the University of Georgia. Hill holds a Ph.D. in Economics from the University of Missouri-Columbia and has published over 70 scholarly papers.

William E. Griffiths is an Emeritus Professor of Econometrics at the University of Melbourne. He joined the university in 2001 and retired in 2018, having served in various leadership roles, including Head of the Department of Economics and Director of the Centre for Micro Econometrics. Griffiths has made significant contributions to econometric methodology, with research interests spanning Bayesian inference, demand modeling, and income distribution analysis.

Guay C. Lim is a Professorial Fellow at the Melbourne Institute of Applied Economic and Social Research at the University of Melbourne. She holds a Ph.D. from the Australian National University and has extensive experience in macroeconomic modeling, forecasting, and policy analysis.

Chandan Sharma is a Professor in Economics and Business Environment area with Indian Institute of Management Lucknow. He teaches Macroeconomics, International Economics and Finance, Public Economics and Econometrics. His research focuses on Industrial Economics, Infrastructure, Development Economics, Political Economy and Shadow Economy. He has worked extensively on firm-level productivity, ICT, R&D, Infrastructure and growth nexus, Optimum currency Area (OCA) and international reserves.

Table of Contents

1 An Introduction to Econometrics
1.1 Why Study Econometrics?
1.2 What Is Econometrics About?
1.2.1 Some Examples
1.3 The Econometric Model
1.4 Economic Versus Statistical Models
1.4 How Are Data Generated?
1.4.1 Experimental Data
1.4.2 Quasi-Experimental Data
1.4.3 Nonexperimental Data
1.5 Types of Data Sets
1.5.1 Time-Series Data
1.5.2 Cross-Section Data
1.5.3 Pooled Time-Series Data
1.6 The Research Process
1.7 Writing an Empirical Research Paper
1.7.1 Writing a Research Proposal
1.7.2 A Format for Writing a Research Report
1.8 Sources of Economic Data
1.8.1 Links to Economic Data on the Internet
1.8.2 Interpreting Economic Data
1.8.3 Obtaining the Data
ANNEXURE 1 Important Databases in India

2 The Simple Linear Regression Model
2.1 An Economic Model
2.2 An Econometric Model
2.3 Data Generating Process
2.2.2 The Random Error and Strict Exogeneity
2.3 The Regression Function
2.2.4 Random Error Variation
2.2.5 Error Mean
2.2.6 Error Normality
2.2.7 Generalizing the Exogeneity Assumption
2.2.8 Error Correlation
2.3 Summarizing the Assumptions
2.4 Estimating the Regression Parameters
2.5.1 The Least Squares Principle
2.3.2 Other Economic Models
2.4 Assessing the Least Squares Estimators
2.4.1 The Estimator b2
2.4.2 The Expected Values of b1 and b2
2.4.3 Sampling Variation
2.4.4 The Variances and Covariance of b1 and b2
2.4.5 The Gauss-Markov Theorem
2.6 The Probability Distributions of the Least Squares Estimators
2.7 Estimating the Variance of the Error Term
2.7.1 Estimating the Variances and Covariance of the Least Squares Estimators
2.7.2 Interpreting the Standard Errors
2.8 Estimating Nonlinear Relationships
2.8.1 Quadratic Functions
2.8.2 Using a Quadratic Model
2.8.3 A Log-Linear Function
2.8.4 Using a Log-Linear Model
2.8.5 A Choice of Functional Forms
2.9 Regression with Indicator Variables
2.10 The Independent Variable
2.10.1 Random and Independent x
2.10.2 Random but Strictly Exogenous x
2.10.3 Random Sampling
Keywords
Problems

3 Interval Estimation and Hypothesis Testing
3.1 Interval Estimation
3.1.1 The t Distribution
3.1.2 Obtaining Interval Estimates
3.1.3 An Illustration Revisited
3.2 Hypothesis Tests
3.2.1 The Null Hypothesis
3.2.2 The Alternative Hypothesis
3.2.3 The Test Statistic
3.2.4 The Rejection Region
3.2.5 A Conclusion
3.3 Rejection Regions for Specific Alternatives
3.3.1 One-Tail Tests with Alternative "Less Than" (<)
3.3.2 One-Tailed Tests with Alternative "Less Than" (>)
3.3.3 Two-Tailed Tests with Alternative "Not Equal To" (≠)
3.4 Examples of Hypothesis Tests
3.5 The p-Value
3.6 Linear Combinations of Parameters
3.6.1 Testing a Linear Combination of Parameters
Keywords
Problems

4 Prediction, Goodness-of-Fit, and Modeling Issues
4.1 Least Squares Prediction
4.2 Measuring Goodness-of-Fit
4.2.1 Correlation Analysis
4.2.2 Correlation Analysis and R2
4.3 Modeling Issues
4.3.1 The Effects of Scaling the Data
4.3.2 Choosing a Functional Form
4.3.3 A Linear-Log Food Expenditure Model
4.4 Using Diagnostic Residual Plots
4.3.5 Are the Regression Errors Normally Distributed?
4.4 Identifying Influential Observations
4.4 Polynomial Models
4.5.1 Quadratic and Cubic Equations
4.5 Log-Linear Models
4.5.1 Prediction in the Log-Linear Model
4.5.2 A Generalized R2 Measure
4.5.3 Prediction Intervals in the Log-Linear Model
4.5.4 Log-Log Models
Keywords
Problems

5 The Multiple Regression Model
5.1 Introduction
5.1.1 The Economic Model
5.1.2 The Econometric Model
5.1.3 Assumptions of the Multiple Regression Model
5.2 Estimating the Parameters of the Multiple Regression Model
5.2.1 Least Squares Estimation Procedure
5.2.2 Estimating the Error Variance σ2
5.2.3 Estimating the Covariance
5.2.4 Frisch-Waugh-Lovell (FWL) Theorem
5.3 Finite Sample Properties of the Least Squares Estimator
5.3.1 The Variances and Covariances of the Least Squares Estimators
5.3.2 The Distribution of the Least Squares Estimators
5.4 Interval Estimation
5.4.1 Interval Estimation for a Single Coefficient
5.4.2 Interval Estimation for a Linear Combination of Coefficients
5.5 Hypothesis Tests
5.5.1 Testing the Significance of a Single Coefficient
5.5.2 One-Tailed Hypothesis Testing for a Single Coefficient
5.5.3 Hypothesis Testing for a Linear Combination of Coefficients
5.6 Nonlinear Relationships
5.7 Large-Sample Properties of the Least Squares Estimator
5.7.1 Consistency
5.7.2 Asymptotic Normality
5.7.3 Relaxing Assumptions
5.7.4 Inference for a Nonlinear Function of Coefficients
Keywords
Problems

6 Further Inference in the Multiple Regression Model
6.1 Testing Joint Hypotheses: The F-Test
6.1.1 Testing the Significance of the Model
6.1.2 The Relationship Between t- and F-Tests
6.1.3 More General F-Tests
6.2 Using Nonsample Information
6.3.5 Large-Sample Tests
6.2 The Use of Nonsample Information
6.4 Model Specification
6.3.1 Causality versus Prediction
6.3.2 Omitted Variables
6.3.3 Irrelevant Variables
6.3.4 Control Variables
6.3.5 Choosing a Model
6.3.6 RESET
6.4 Collinearity
6.4.1 Predictive Model Selection Criteria
6.5 Poor Data, Collinearity, and Insignificance
6.5.1 Consequences of Collinearity
6.5.2 Identifying and Mitigating Collinearity
6.5.3 Investigating Influential Observations
6.6 Nonlinear Least Squares
Keywords
Problems

7 Using Indicator Variables
7.1 Indicator Variables
7.1.1 Intercept Indicator Variables
7.1.2 Slope-Indicator Variables
7.2 Applying Indicator Variables
7.2.1 Interactions Between Qualitative Factors
7.2.2 Qualitative Factors with Several Categories
7.2.3 Testing the Equivalence of Two Regressions
7.2.4 Controlling for Time
7.3 Log-Linear Models
7.3.1 A Rough Calculation
7.3.2 A Better Approximation
7.4 The Linear Probability Model
7.5 Treatment Effects
7.5.1 The Difference Estimator
7.5.2 Analysis of the Difference Estimator
7.5.3 The Difference Estimator: Multiple Regression
7.6 Treatment Effects and Causal Modeling
7.6.1 The Nature of Causal Effects
7.6.2 Treatment Effect Models
7.6.3 Decomposing the Treatment Effect
7.6.4 Omitted Variables Bias Revisited
7.6.5 The Overlap Assumption
7.6.6 Regression Discontinuity Designs
Keywords
Problems

8 Heteroskedasticity
8.1 The Nature of Heteroskedasticity
8.1.1 Heteroskedasticity in the Multiple Regression Model
8.1.2 The Heteroskedastic Regression Model
8.2.2 Heteroskedasticity: Consequences for the OLS Estimator
8.3 Heteroskedasticity Robust Variance Estimator
8.4 Generalized Least Squares: Known Form of Variance
8.4.1 Weighted Least Squares: Proportional Heteroskedasticity
8.4.2 Weighted Least Squares: Proportional Heteroskedasticity
8.5 Generalized Least Squares: Unknown Form of Variance
8.5.1 Estimating the Multiplicative Model
8.6 Detecting Heteroskedasticity
8.6.1 The Goldfeld–Quandt Test
8.6.2 A General Test for Conditional Heteroskedasticity
8.6.3 The White Test
8.6.5 Model Specification and Heteroskedasticity
8.7 Heteroskedasticity in the Linear Probability Model
Keywords
Problems

9 Regression with Time-Series Data: Stationary Variables
9.1 Introduction
9.1.1 Modeling Dynamic Relationships
9.1.2 Autocorrelation
9.1.3 Forecasting and Weak Dependence
9.2 Forecasting
9.2.1 Forecast Intervals and Standard Errors
9.2.2 Forecasting Trends and Seasonality
9.3.3 Selecting Lag Lengths
9.3.4 Testing for Granger Causality
9.4 Testing for Serially Correlated Errors
9.4.1 Checking the Correlogram of the Least Squares Residuals
9.4.2 Lagrange Multiplier Test
9.4.3 Durbin-Watson Test
9.5 Time-Series Regressions for Policy Analysis
9.5.1 Finite Distributed Lags
9.5.2 HAC Standard Errors
9.5.3 Estimation When AR(1) Errors
9.5.4 Infinite Distributed Lags
Keywords
Problems

10 Endogenous Regressors and Moment-Based Estimation
10.1 Least Squares Estimation with Endogenous Regressors
10.1.1 Large Sample Properties of the OLS Estimator
10.1.2 Inconsistency of the OLS Estimator: Cases
10.1.3 Proving the Inconsistency of OLS
10.2 Cases in Which x and e Are Contemporaneously Correlated
10.2.1 Measurement Error
10.2.2 Simultaneous Equations Bias
10.2.3 Lagged Dependent Variable Models with Serial Correlation
10.2.4 Omitted Variables
10.3 Estimators Based on the Method of Moments
10.3.1 Method of Moments Estimation of a Population Mean and Variance
10.3.2 Method of Moments Estimation in the Simple Regression Model
10.3.3 Method of Moments Estimation in the Multiple Regression Model
10.3.4 The Importance of Using Strong Instruments
10.3.5 Proving the Consistency of the IV Estimator
10.3.6 The Two-Stage Least Squares Estimator (2SLS)
10.3.7 Using Surplus Moment Conditions
10.3.8 Instrumental Variables Estimation in the Multiple Regression Model
10.3.9 Assessing Instrument Strength Using the First-Stage Model
10.3.10 Instrumental Variables Estimation in a General Model
10.3.11 Checking Instrument Validity When Using IV Estimation
10.4 Specification Tests
10.4.1 The Hausman Test for Endogeneity
10.4.2 The Logic of the Hausman Test
10.4.3 Testing Instrument Validity
Keywords
Problems

11 Simultaneous Equations Models
11.1 A Supply and Demand Model
11.1.1 The Inconsistency of OLS
11.2 The Failure of Least Squares Estimation
11.2.1 Proving the Failure of OLS
11.2.2 The Identification Problem
11.5 Two-Stage Least Squares Estimation
11.5.1 The General Two-Stage Least Squares Estimation Procedure
11.5.2 The Properties of the Two-Stage Least Squares Estimator
Keywords
Problems

12 Regression with Time-Series Data: Nonstationary Variables
12.1 Stationary and Nonstationary Variables
12.1.1 Trend Stationary Variables
12.1.2 The First-Order Autoregressive Model
12.1.3 Random Walk Models
12.2 Consequences of Stochastic Trends
12.3 Unit Root Tests for Stationarity
12.3.2 Unit Roots
12.3.3 Dickey–Fuller Tests
12.3.3 Dickey-Fuller Test with Intercept and No Trend
12.3.4 Dickey-Fuller Test with Intercept and Trend
12.3.5 Dickey-Fuller Test with No Intercept and No Trend
12.3.6 Order of Integration
12.3.7 Other Unit Root Tests
12.4 Cointegration
12.4.1 The Error Correction Model
12.4.2 Estimation When There Is No Cointegration
12.6 Summary
Keywords
Problems

13 Vector Error Correction and Vector Autoregressive Models
13.1 VEC and VAR Models
13.2 Estimating a Vector Error Correction Model
13.2.1 Testing for Granger Causality
13.4 Impulse Responses and Variance Decompositions
13.4.1 Impulse Response Functions
13.4.2 Forecast Error Variance Decompositions
Keywords
Problems
ANNEXURE 13 Local Projections for Impulse Response Functions

14 Time-Varying Volatility and ARCH Models
14.1 The ARCH Model
14.2 Testing for Heteroskedasticity
14.3 Testing, Estimating, and Forecasting
14.4 Extensions
14.4.1 The GARCH Model—Generalized ARCH
14.4.2 Allowing for an Asymmetric Effect
14.4.3 GARCH-in-Mean and Time-Varying Risk Premium
14.4.4 Other Developments
Keywords
Problems

15 Panel Data Models
15.1 The Panel Data Regression Function
15.1.1 Further Discussion of Unobserved Heterogeneity
15.1.2 Panel Data Regression Function: Fixed Effects
15.1.3 Using OLS to Estimate the Panel Data Regression
15.2 The Fixed Effects Estimator
15.2.1 The Difference Estimator: T = 2
15.2.2 The Within Estimator: T > 2
15.2.3 The Fixed Effects Estimator
15.2.4 The Least Squares Dummy Variable Model
15.3 Panel Data Regression Error Assumptions
15.3.1 Fixed Effects Estimation with Cluster-Robust Standard Errors
15.3.2 Fixed Effects Estimation with Cluster-Robust Standard Errors
15.4 The Random Effects Estimator
15.4.1 Testing for Random Effects
15.4.2 A Hausman Test for Endogeneity in the Random Effects Model
15.4.3 The Mundlak Approach to the RE Test
15.4.4 The Hausman-Taylor Estimator
15.4.5 Summarizing Panel Data Assumptions
15.4.6 Summarizing and Extending Panel Data Model Estimation
Keywords
Problems

16 Qualitative and Limited Dependent Variable Models
16.1 Introducing Models with Binary Dependent Variables
16.1.1 The Linear Probability Model
16.2 Logit and Probit Models
16.2.1 The Probit Model for Binary Choice
16.2.2 Interpreting the Probit Model
16.2.3 Maximum Likelihood Estimation of the Probit Model
16.2.4 The Logit Model for Binary Choices
16.2.5 Wald Hypothesis Tests
16.2.6 Likelihood Ratio Hypothesis Tests
16.2.7 Robust Inference in Probit and Logit Models
16.2.8 Binary Choice Models with a Binary Endogenous Variable
16.2.9 Binary Choice Models with a Binary Endogenous Variable
16.2.10 Binary Endogenous Explanatory Variables
16.2.11 Binary Choice Models and Panel Data
16.3 Multinomial Logit
16.3.1 Multinomial Logit Choice Probabilities
16.3.2 Maximum Likelihood Estimation
16.3.3 Multinomial Logit Postestimation Analysis
16.4 Conditional Logit
16.4.1 Conditional Logit Choice Probabilities
16.4.2 Conditional Logit Postestimation Analysis
16.5 Ordered Choice Models
16.5.1 Ordinal Probit Choice Probabilities
16.5.2 Ordinal Probit Estimation and Interpretation
16.6 Models for Count Data
16.6.1 Maximum Likelihood Estimation of the Poisson Regression Model
16.6.2 Interpreting the Poisson Regression Model
16.7 Limited Dependent Variables
16.7.1 Maximum Likelihood Estimation of the Simple Linear Regression Model
16.7.2 Truncated Regression
16.7.3 Censored Samples and Regression
16.7.4 Tobit Model Interpretation
16.7.5 Sample Selection
Keywords
Problems
ANNEXURE 16 Probit Models for Panel Data
