Description

It requires a lot of coding know-how to build the interfaces, databases, and other features that run modern websites, web apps, and mobile apps. This book serves as an interpreter for the languages that handle those tasks. Start with a refesher on the rules of coding before diving into the languages that build interfaces, add interactivity to the web, or store and deliver data to sites. When you're ready, jump into guidance on how to put it all together to build a site or create an app.
