Programming with Java: Beginner to Advanced, 7ed (An Indian Adaptation)

By Cay S. Horstmann

Paperback 9789363865549 **₹1,399.00**

Description

Programming With Java Beginner to Advanced, 7th Edition is a comprehensive guide designed to introduce Java programming to beginners. This edition is tailored for learners with no prior programming experience and requires only a basic understanding of high school algebra. The book employs objects and classes from Java's standard library from the outset, with a structured introduction to object-oriented design commencing in Chapter 8. This gradual approach allows students to familiarize themselves with object usage early on while learning their core algorithmic concepts, thereby avoiding the development of improper coding practices. The latter half of the book covers algorithms and data structures at a level suitable for novice programmers.
