Investment Valuation: Tools and Techniques for Determining the Value of Any Asset, 4ed (An Indian Adaptation)

By Aswath Damodaran

Paperback 9789370601710 ₹1,199.00

Pages: 1140

Description

Valuation may seem complex, but at its core, it is simple and applies across sectors, geographies, and company types. In this Indian adaptation of Investment Valuation: Tools and Techniques for Determining the Value of Any Asset, 4th Edition, renowned New York University Stern Business School Professor Aswath Damodaran demystifies the process of valuing assets—stocks, bonds, real assets, and more—using global frameworks adapted to India's fast-evolving market.

India's market has captured global attention, driven by a compelling growth story, rising equity prices, increasing retail participation, and the continued influence of family-run businesses. This edition reflects these dynamics, helping readers apply sound valuation principles within the Indian context.

Whether you're a student, a self-taught learner, or an active investor, this book will guide you in applying valuation lessons to companies that interest you—in India or anywhere else.

About the Author

Aswath Damodaran

ASWATH DAMODARAN is Professor of Finance at New York University's Leonard N. Stern School of Business. He teaches corporate finance and valuation at leading investment banks. He has been the recipient of numerous awards for outstanding teaching, including the NYU Distinguished Teaching Award, and was named one of the nation's top business school teachers by BusinessWeek.
