eBook - Design of Logic-based Intelligent Systems

By Klaus Truemper

eBook 9789373323718 ₹- *Price*

Pages: 366

Description

Design of Logic-based Intelligent Systems by Klaus Truemper presents principles and methods for constructing intelligent systems using an extension of propositional logic. It covers levels of thinking, expert systems, reasoning under uncertainty, learning logic from data, and nonmonotonic reasoning, serving as both a handbook for AI practitioners and advanced students.

About the Author

Klaus Truemper

Klaus Truemper is a professor of computer science at the University of Texas at Dallas.

Table of Contents

Chapter 1 Introduction

PART I: LOGIC PROBLEMS

Chapter 2 Introduction to Logic and Problems SAT and MINSAT

Chapter 3 Variations of SAT and MINSAT

Chapter 4 Quantified SAT and MINSAT

PART II: FORMULATION OF LOGIC SYSTEMS

Chapter 5 Basic Formulation Techniques

Chapter 6 Uncertainty

PART III: LEARNING

Chapter 7 Learning Formulas

Chapter 8 Accuracy of Learning Formulas

PART IV: ADVANCED REASONING

Chapter 9 Nonmonotonic and Incomplete Reasoning

Chapter 10 Question-and-Answer Processes

PART V: APPLICATIONS

Chapter 11 Applications
