WILEY

Soil Mechanics and Foundation Engineering, As per AICTE

By B.N.D. Narasinga Rao

Paperback 9788126540396 ₹2,599.00

Description

Soil Mechanics and Foundation Engineering has seen unprecedented growth over the last few decades both in terms of knowledge and practice as well as in its significance in civil engineering profession. The fundamentals of the subject are explained in a simple language in the book. Over 1300 numerical and objective questions with solutions have been included in the book. It is the author's experience that questions from competitive exams such as GATE, IES, IAS, IFS, etc., involve some of the subtle and fine concepts of the subject and their practical application, which cannot be gained by simple reading of the subject.

About the Author

B.N.D. Narasinga Rao

The author Dr. B.N.D. Narasinga Rao, University First in M.E. (Soil Mechanics) and Ph.D. with CSIR SRF from Andhra University, in 1997, has over 25 years of teaching, research and consultancy experience which prompted him to write the present book on Soil Mechanics and Foundation Engineering. The author is formerly Professor and Principal of KKIT and KITS Engineering colleges and is currently Professor and Head of Civil Engineering, Anil Neerukonda Institute of Technology & Sciences (ANITS), Sangivalasa

Table of Contents

Foreword

Preface

Acknowledgements

1 Introduction

1.1 Introduction

1.2 Definitions

1.3 History of Soil Mechanics

1.4 Applications of Soil Mechanics

1.5 Professional Activities in Geotechnical Engineering

2 Origin and Formation of Soils

2.1 Introduction

2.2 Soil Formation

2.3 Weathering

2.4 Erosion

2.5 Factors Influencing Weathering and Soil Formation
2.6 Residual Soils
2.7 Transported Soils
2.8 Types of Soil Profile
2.9 Soil Horizons
2.10 Soil Deposits of India
3 Soil Mineralogy and Structure
3.1 Introduction
3.2 General Types of Soils Based on Particle Size
3.3 Soil Mineralogy
3.4 Primary and Secondary Minerals
3.5 Bonding in Soils
3.6 Mineralogy of Fine-Grained Soils
3.7 Kaolinite
3.8 Montmorillonite
3.9 Illite
3.10 Chlorite
3.11 Vermiculite
3.12 Isomorphous Substitution
3.13 Properties of Clay Minerals
3.14 Identification of Clay Minerals
3.15 Soil Structure and Soil Fabric
3.16 Mineralogy of Cohesionless Soils
4 Physical Properties of Soils
4.1 Introduction
4.2 Three-Phase System of Soil
4.3 Phase Diagram of Soil
4.4 Physical Properties of Soils
4.5 Functional Relationships between Physical Properties
4.6 Physical Properties in Terms of Mass
4.7 Functional Relationships of Physical Properties in Terms of Mass
4.8 Preparation of Soil Samples for Determination of Physical Properties
4.9 Determination of Water Content
4.10 Determination of Specific Gravity
4.11 Determination of in-situ Density
4.12 Relative Density
5 Plasticity Characteristics of Soils
5.1 Introduction

5.2 Consistency

5.3 Consistency Limits

5.4 Liquid Limit

5.5 Plastic Limit

5.6 Index Properties of Soils

5.7 Shrinkage Limit

5.8 Uses of Consistency Limits

5.9 Classification of Soils Based on Index Properties

4 Soil Classification
4.1 Need for Soil Classification
4.2 Particle Size Classification
4.3 Textural Classification of Soils
4.4 Grain Size Analysis of Soil
4.5 Cruin Size Distribution Curve
4.6 Plasticity Characteristics
4.7 AASHTO Classification
4.8 Unified Soil Classification System
4.9 Indian Standard Classification System (IS:1498 - 1970)
4.10 Field Identification Tests for Fine-Grained Soils
7 Stresses Due to Self-Weight
7.1 Introduction
7.2 Total Stress
7.3 Pore Water Pressure
7.4 Effective Stress Principle
7.5 Effective Stress
8 Vertical Stress Due to Applied Loads
8.1 Introduction
8.2 Boussinesq Theory for Vertical Stress Due to Concentrated Load
8.3 Vertical Stress below Strip Footing
8.4 Newmark's Influence Chart
8.5 Westergaard's Theory for Vertical Stress
8.6 The 2:1 Distribution Method
8.7 Comparison of Various Methods for Determination of Vertical Stress
9 Permeability of Soils
9.1 Introduction
9.2 Capillary Rise in Soils
9.3 Flow of Water through Soil
9.4 Permeability
9.5 Darcy's Law
9.6 Coefficient of Absolute Permeability
9.7 Determination of Coefficient of Perm
9.8 Determination of Permeability
9.9 Constant Head Permeability Test
9.10 Falling Head Permeability Test
9.11 Capillary Permeability Test
9.12 Consolidation Test
9.13 Permeability of Stratified Soil Deposits
10 Seepage Analysis
10.1 Introduction
10.2 Types of Soil Formations
10.3 Basic Definitions
10.4 Dupuit's Theory for Determination of Permeability
10.5 Piezometric Tubes
10.6 Pumping-In Tests
10.7 Pumping-Out Tests
10.8 Total Head, Pressure Head, and Datum Head
10.9 Seepage Pressure and Quicksand
10.10 Laplace Equation for Two Dimensional Flow
10.11 Flow Net
10.12 Methods of Drawing a Flow Net
10.13 Determination of Seepage Quantities from a Flow Net
10.14 Flow Net for Anisotropic Soils
10.15 Piping Line in Earth Dams
10.16 Protective Filters to Prevent Piping
10.17 Seepage Control in Hydraulic Structures: Prevention of Piping Failures
10.18 Design of Graded Filter
11 Compaction
11.1 Introduction
11.2 Significance of Compressibility and Consolidation
11.3 Mechanical Analogy for Consolidation: Spring-Dashpot-Spring Analogy
11.4 Parameters for Measurement of Compressibility of Soils
11.5 Determination of Consolidation Settlement
11.6 Terzaghi's Theory of Consolidation
11.7 Odometer or Consolidation Test
11.8 Pre-Compression and Pre-Consolidation Pressure
11.9 Normally Consolidated and Over-Consolidated Clays
11.10 Components of Settlement
11.11 Construction Period Correction: Prediction of Field Consolidation Curve
11.12 Consolidation Settlement of Overlying Sand Stems
11.13 Three-Dimensional Consolidation
12 Compaction
12.1 Introduction
12.2 Principle of Compaction
12.3 Effect of Compaction on Engineering Properties of the Soil
12.4 Standard Proctor Test
12.5 IS Light Compaction Test
12.6 IS Heavy Compaction Test
12.7 Maximum Dry Density vs. Zero Air Void Line
12.8 Compaction Curve for Sands
12.9 Factors Affecting Compaction
12.10 Compaction in the Field
13 Shear Strength
13.1 Introduction
13.2 Normal Stresses and Principal Planes
13.3 Mohr's Circle of Stresses
13.4 Mohr-Coulomb Failure Theory
13.5 Determination of Shear Strength
13.6 Direct Shear Test
13.7 Triaxial Compression Test
13.8 Unconfined Compression Test
13.9 Vane Shear Test
13.10 Bore Hole Shear Test
13.11 Field Tests
13.12 Pore Pressure Parameters
13.13 Stress Path
14 Soil Exploration
14.1 Introduction
14.2 Need for Soil Exploration
14.3 Preliminary Investigation of Soil Exploration
14.4 Methods of Soil Exploration
14.5 Soil Samples
14.6 Boring Methods
14.7 Location of CBRT
14.8 In Situ Tests
14.9 Soil Exploration Report
15 Lateral Earth Pressure
15.1 Introduction
15.2 Active Earth Pressure
15.3 Types of Lateral Earth Pressure
15.4 Rankine's Theory of Active Earth Pressure at Rest
15.5 Rankine's Theory of Active Earth Pressure for Cohesionless Backfill
15.6 Rankine's Active Earth Pressure for Cohesive Backfill
15.7 Rankine's Passive Earth Pressure
15.8 Rankine's Theory of Passive Earth Pressure for Cohesionless Backfill
15.9 Rankine's Passive Earth Pressure for Cohesive Backfill
15.10 Rankine's Earth Pressure for Retaining Wall with Inclined Back
15.11 Coulomb's Wedge Theory for Earth Pressure
15.12 Coulomb's Wedge Theory for Cohesionless Earth Pressure
15.13 Culmann's Graphical Construction for Passive Earth Pressure
15.14 Culmann's Construction for Active Earth Pressure
15.15 Coulomb's Theory for Active Earth Pressure for Cohesive Backfill
15.16 Trial Wedge Method for Lateral Earth Pressure
15.17 Coulomb's Theory for Passive Earth Pressure for Cohesionless Backfill
15.18 Lateral Earth Pressure by Friction Circle Method
16 Retaining Structures
16.1 Introduction
16.2 Types of Walls, Drift and Drainage
16.3 Types of Retaining Walls
16.4 Cantilever Sheet Pile in Granular Soil
16.5 Anchored Sheet Pile in Granular Soil
16.6 Anchored Sheet Pile in Cohesionless Soil: Free Earth Support Method
16.7 Anchored Sheet Pile in Cohesive Soil
16.8 Anchored Sheet Pile in Cohesive Soil: Fixed Earth Support Method
16.9 Rowe's Moment Reduction for Anchored Wall
16.10 Miscellaneous Types of Retaining Structures
17 Stability of Earth Slopes
17.1 Introduction
17.2 Definition of Factor of Safety
17.3 Infinite Slopes of Cohesionless Soils
17.4 Stability Analysis of Infinite Slopes
17.5 Stability Analysis of Finite Slopes: Culmann's Method
17.6 Stability Analysis of Finite Slopes: Method of Swedish Circle Method
17.7 Stability Analysis of Slopes of Earth Dams
17.8 Bishop's Simplified Method of Slices
17.9 Fellenius' Method of Slices
17.10 Taylor's Stability Number and Stability Charts
17.11 Improving the Stability of Slopes
18 Bearing Capacity of Shallow Foundations
18.1 Introduction
18.2 Design Criteria of Shallow Foundations
18.3 Terzaghi's Theory of Bearing Capacity
18.4 Rankine's Theory of Bearing Capacity
18.5 Prandtl's Theory of Bearing Capacity
18.6 Meyerhof's Theory of Bearing Capacity
18.7 Types of Shear Failure of Soil
18.8 Skempton's Theory of Bearing Capacity
18.9 Hansen's Theory of Bearing Capacity
18.10 Meinert's Theory of Bearing Capacity
18.11 Vesic's Theory of Bearing Capacity
18.12 Plate Load Test
19 Settlement of Shallow Foundations
19.1 Introduction
19.2 Need for Limitation
19.3 Types of Shallow Foundations
19.4 Components of Settlement
19.5 Relation between Settlement Computation
19.6 Estimation of Settlements for Cohesionless Soils
19.7 Plate Load Test
19.8 Estimation of Settlement for Cohesive Soils
19.9 Corrections to Total Settlement for Depth and Rigidity of Foundation
19.10 Differential Settlements and Distortion
19.11 Allowable Settlements
19.12 Indian Standard (IS:1080) Specifications for Foundations
20 Pile Foundations
20.1 Introduction
20.2 Classification of Pile Foundations
20.3 Construction of Piles
20.4 Estimation of Load Capacity from Pile to Soil
20.5 Estimation of Load Capacity of Piles: Static Formulae
20.6 Estimation of Load Capacity of Piles: Dynamic Formulae
20.7 Estimation of Load Capacity from SPT and CPT
20.8 Estimation of Load Capacity from SPT
20.9 Estimation of Load Capacity from Load Test on Piles
20.10 Pile Load Test
20.11 Settlement of a Pile Group
20.12 Negative Skin Friction
20.13 Under-Reem Pile Foundations
21 Well Foundations
21.1 Introduction
21.2 Caissons
21.3 Components of Well Foundation
21.4 Depth of a Well Foundation
21.5 Shapes of Well Foundations
21.6 Stability Analysis of Well Foundations
21.7 Factor of Safety
21.8 Construction of Well Foundations
21.9 Tilting and Shifting of Wells

Annexure I
to 22
22 Soil Dynamics and Machine Foundations
22.1 Introduction
22.2 Types of Machines
22.3 Types of Machine Foundations
22.4 Design Criteria for Machine
22.5 Procedure for Dynamic Analysis of Machine Foundation
22.6 Dynamic Soil Properties
22.7 Methods of Vibration Isolation Foundations
22.8 Vibration and Shock Isolation
23 Ground Improvement Techniques
23.1 Introduction
23.2 Objectives of Ground Improvement
23.3 Classification of Ground Improvement Methods
23.4 Mechanical Stabilization
23.5 Sand Compaction Piles
23.6 Blasting
23.7 Vibroflotation Compaction
23.8 Preloading
23.9 Sand Drains
23.10 Prefabricated Vertical Drains
23.11 Stone Columns
23.12 Reinforced Earth
23.13 Soil Nailing
23.14 Geosynthetics
23.15 Foundation Grouting
23.16 Underpinning
23.17 Seepage Control and Dewatering Systems
23.18 Freezing
23.19 Miscellaneous
24 Foundations in Expansive Soils
24.1 Introduction
24.2 Problems for Structures Built on Expansive Soils
24.3 Factors Affecting Seasonal Moisture Variations
24.4 Active Zone
24.5 Classification of Swelling
24.6 Factors Influencing Heave
24.7 Estimation of Heave
24.8 Estimation of Swelling Pressure
24.9 Identification and Classification of Expansive Soils
24.10 Foundation Techniques in Expansive Soils
24.11 Construction on Expansive Soils
24.12 Remedial Options
