Description

The purpose of the subject Discrete Mathematical Structures is to develop the understanding of theoretical foundations of Computer Science. The emphasis is given on the applications of discrete structures in computer science. Discrete structures include important material from areas such as Set Theory, Proving Methods, Algebraic Structures, Logic, Graphs, Trees, Recurrences and Combinatorics.

About the Author

Y N Singh

The author is an Assistant Professor at Department of Computer Science and Engineering, Institute of Engineering & Technology. His areas of interest include: Biometric Systems, Machine Learning Methods & Algorithms, Medical Image Computing, Computer Vision and Pattern Recognition. My aim is to explore the knowledge of Mathematics, Cognitive Science, Artificial Intelligence and Biological Science to provide the solutions of the problems related to Real Time Identity Management System, Computer Vision and Human Computer Interaction.

Table of Contents

Chapter 1 Set Theory

1.1 Introduction

1.2 Empty Set

1.3 Size of Sets and Cardinals

1.4 Venn Diagram

1.5 Subsets

1.6 Combinations of Sets

1.7 Multisets

1.8 Ordered Pairs

1.9 Set Identities

Chapter 2 Relations

2.1 Introduction

2.2 Properties of Relations

2.3 Representation of Relations

2.4 Composite Relations

2.5 Order of Relations
Chapter 3 Functions
3.1 Introduction
3.2 Classification of Functions
3.3 Operations on Functions
3.4 Recursively Defined Functions
Chapter 4 Natural Numbers
4.1 Introduction
4.2 Mathematical Induction
4.3 Induction Examples
4.4 Variants of Induction
Chapter 5 Algebraic Structures
5.1 Introduction
5.2 Groups
5.3 Subgroups and Order
5.4 Cyclic Groups
5.5 Cosets
5.6 Normal Subgroups
5.7 Permutation and Symmetric Groups
5.8 Group Homomorphisms
5.9 Rings
5.10 Fields
5.11 Integers Modulo n
Chapter 6 Lattices
6.1 Introduction
6.2 Partial Order Sets
6.3 Preorder
6.4 Combinations of Partial Order Sets
6.5 Hasse Diagram
6.6 Bounds
6.7 Lattices
6.8 Properties of Lattices
6.9 Morphisms of Lattices
Chapter 7 Boolean Algebra
7.1 Introduction
7.2 Boolean Operators and Precedence
7.3 Axiomatics of Boolean Algebra
7.4 Theorems of Boolean Algebra

7.5 Boolean Expressions and Functions
7.6 Algebraic Manipulation of Boolean Expressions
7.7 Simplification of Boolean Functions
7.8 Logic Gates
7.9 Digital Circuits and Boolean Algebra
7.10 Combinational Circuits
7.11 Sequential Circuits
Chapter 8 Propositional Logic
8.1 Introduction
8.2 Sentences
8.3 Statements
8.4 Propositional Logic
8.5 Theory of Inference
8.6 Natural Deduction
8.7 Predicate Logic
Chapter 9 Trees
9.1 Binary Trees
9.2 Binary Tree Representation
9.3 Binary Tree Traversal
9.4 Evaluation of Binary Expression Trees
9.5 Binary Search Trees
Chapter 10 Graphs
10.1 Paths and Cycles
10.2 Connectivity
10.3 Subgraph
10.4 Contraction and Minors
10.5 Degree of a Vertex
10.6 Regular Graph
10.7 Representation of Graphs
10.8 Bipartite Graphs
10.9 Planar Graphs
10.10 Isomorphism and Homeomorphism of Graphs
10.11 Multigraph
10.12 Euler Paths
10.13 Hamiltonian Paths
10.14 Graph Coloring
Chapter 11 Recurrence Relations
11.1 Linear Recurrences

11.2 Inhomogeneous Recurrences

11.3 Growth of Functions

11.4 Recurrences from Algorithms

Chapter 12 Generating Functions

12.1 Generation Functions

12.2 Generating Functions for Recurrences

12.3 Operations on Generating Functions

12.4 Generating Functions and Combinatorics

12.5 Useful Power Series

Chapter 13 Combinatorics

13.1 Counting Techniques

13.2 Pigeonhole Principle

13.3 Pólya's Counting Theory
