

Demystifying NoSQL

By Seema Acharya

Paperback

9788126579969

₹599.00

Pages: 280

Description

NoSQL databases are non-relational, open-source, distributed, schema-less, and cluster friendly databases. They are hugely popular today owing to their ability to scale out or scale horizontally and the adeptness at dealing with a rich variety of data: structured, semi-structured and unstructured data. They are malleable and flexible enough to accommodate sparse datasets, besides maintaining cost efficiency and availability.

About the Author

Seema Acharya

Seema Acharya is an Associate Vice President and Senior Lead Principal with the Education, Training and Assessment department of Infosys Limited. She is a technology evangelist, learning strategist and a passionate tech author with over 20 years of experience in conceptualizing, designing and implementing competency development/enhancement programs in alignment with business strategy to cater to short term as well as long term organizational goals.

Table of Contents

Preface

About the Author

Acknowledgements

Chapter 1 Getting Started with NoSQL

1.1 What has Changed in the Last Decade?

1.2 History of NoSQL

1.3 What is NoSQL?

1.4 Why NoSQL?

1.5 NoSQL Databases

1.6 Types of NoSQL Databases

1.7 SQL versus NoSQL

1.8 ACID versus BASE

1.9 CAP Theorem

Chapter 2 Types of NoSQL Databases

2.1 Introduction

2.2 Key–Value Pair Databases

2.3 Document Databases

2.4 Column-Family Databases

2.5 Graph Database

Chapter 3 Column-Family Store

3.1 Introduction to Apache Cassandra

3.2 Features of Cassandra

3.3 Cassandra Query Language Data Types

3.4 Cassandra Query Language Shell (Cqlsh)

3.5 Collections

3.6 Cassandra Counter Column

3.7 Time-to-Live (TTL)

3.8 Alter Commands

3.9 Import from and Export to CSV

3.10 Querying System Tables

Chapter 4 MongoDB

4.1 What is MongoDB?

4.2 Why MongoDB?

4.3 Terms used in RDBMS and MongoDB

4.4 CRUD Operations

Chapter 5 Neo4j: A Graph-Based Database

5.1 Introduction to Graph Database

5.2 Creating Nodes

5.3 Create a Relationship

5.4 WHERE Clause

5.5 Creating a Complete Path

5.6 Create Index

5.7 Create Constraints

5.8 Select Data with MATCH

5.9 Fetch All Nodes

5.10 Drop an Index

5.11 Drop a Constraint

5.12 Delete a Node

5.13 Delete Multiple Nodes

5.14 Delete All Nodes

5.15 Delete a Relationship

5.16 Merge Command

Chapter 6 NoSQL Database Orientation

6.1 RDBMS or NoSQL?

6.2 Key-Value Store

6.3 Column Family Store

6.4 Document Store

6.5 Graph Store

6.6 Examples of NoSQL Databases

Annexure A – Project 1 in MongoDB Database

Annexure B – Project 2 in MongoDB Database

Annexure C – Possible Interview Questions and Answers
