Description

Every new version of Java is important, but Java 8 is a game changer. Java 8 in Action is a clearly written guide to the new features of Java 8. It begins with a practical introduction to lambdas, using real-world Java code. Next, it covers the new Streams API and shows how you can use it to make collection-based code radically easier to understand and maintain. It also explains other major Java 8 features including default methods, Optional, CompletableFuture and the new Date and Time API.

Table of Contents

Part 1 Fundamentals

Chapter 1 Java 8: why should you care?

· Why is Java still changing?

· Functions in Java

· Streams

· Default methods

· Other good ideas from functional programming

Chapter 2 Passing code with behavior parameterization

· Coping with changing requirements

· Behavior parameterization

· Tackling verbosity

· Real-world examples

Chapter 3 Lambda expressions

· Lambdas in a nutshell

· Where and how to use lambdas

· Putting lambdas into practice: the execute around pattern

· Using functional interfaces

· Type checking, type inference and restrictions

· Method references

· Putting lambdas and method references into practice!

· Useful methods to compose lambda expressions

· Similar ideas from mathematics

Part 2 Functional-style data processing

Chapter 4 Introducing streams

· What are streams?

· Getting started with streams

· Streams vs. collections

· Stream operations

Chapter 5 Working with streams

· Filtering and slicing

· Mapping

· Finding and matching

· Reducing

· Putting it all into practice

· Numeric streams

· Building streams

Chapter 6 Collecting data with streams

· Collectors in a nutshell

· Reducing and summarizing

· Grouping

· Partitioning

· The Collector interface

· Developing your own collector for better performance

Chapter 7 Parallel data processing and performance

· Parallel streams

· The fork/join framework

· Spliterator

Part 3 Effective Java 8 programming

Chapter 8 Refactoring, testing and debugging

· Refactoring for improved readability and flexibility

· Refactoring object-oriented design patterns with lambdas

· Testing lambdas

· Debugging

Chapter 9 Default methods

· Evolving APIs

· Default methods in a nutshell

· Usage patterns for default methods

· Resolution rules

Chapter 10 Using Optional as a better alternative to null

· How do you model the absence of a value?

· Introducing the Optional class

· Patterns for adopting Optional

· Practical examples of using Optional

Chapter 11 CompletableFuture: composable asynchronous programming

· Futures

· Implementing an asynchronous API

· Make your code non-blocking

· Pipelining asynchronous tasks

· Reacting to a CompletableFuture completion

Chapter 12 New Date and Time API

· LocalDate, LocalTime, Instant, Duration and Period

· Manipulating, parsing and formatting dates

· Working with different time zones and calendars

Part 4 Beyond Java

Chapter 13 Thinking functionally

· Implementing and maintaining systems

· What’s functional programming?

· Recursion vs. iteration

Chapter 14 Functional programming techniques

· Functions everywhere

· Persistent data structures

· Lazy evaluation with streams

· Pattern matching

· Miscellany

Chapter 15 Blending OOP and FP: comparing Java 8 and Scala

· Introduction to Scala

· Functions

· Classes and traits

Chapter 16 Conclusions and where next for Java

· Review of Java 8 features

· What’s ahead for Java?
