

Introduction to Analog and Digital Communications, 2ed (An Indian Adaptation)

By [Simon Haykin](#)

Paperback

9789354644337

₹1,099.00

Pages: 672

Description

Introduction to Analog and Digital Communications, second edition, offers up-to-date coverage on the principles of analog and digital communications, focusing on the fundamentals of communication theory and relating theory to practice. Adopting a “systems” perspective approach, the book focuses on the concepts of modulation theory, probability theory and signal detection, and the role of noise in communication systems. Numerous worked-out examples as well as theme examples have been included to help students develop an intuitive grasp of the theory.

Table of Contents

Chapter 1 Introduction

1.1 Overview

1.2 Functional Elements of Communication Systems

1.3 Primary Resources and Operational Requirements

1.4 Underpinning Theories of Communication Systems

1.5 Applications

1.6 Concluding Remarks

Chapter 2 Fourier Representation of Signals and Systems

2.1 Fourier Series

2.2 The Fourier Transform

2.3 Properties of the Fourier Transform

2.4 The Inverse Relationship Between Time and Frequency

2.5 Dirac Delta Function

2.6 Fourier Transforms of Periodic Signals

2.7 Transmission of Signals Through Linear Systems: Convolution Revisited

2.8 Ideal Low-Pass Filters

2.9 Correlation and Spectral Density: Energy Signals

2.10 Power Spectral Density

2.11 Positive and Negative Frequencies

2.12 Hilbert Transform

2.13 Pre-Envelopes and Complex Envelopes of Band-Pass Signals

2.14 Complex Low-Pass Representations of Band-Pass Systems

2.15 Numerical Computation of the Fourier Transform

2.16 Summary and Discussion

Chapter 3 Amplitude Modulation

3.1 Amplitude Modulation

3.2 Virtues, Limitations, and Modifications of Amplitude Modulation

3.3 Double Sideband-Suppressed Carrier Modulation and Demodulation

3.4 Costas Receiver

3.5 Quadrature-Carrier Multiplexing

3.6 Single-Sideband Modulation and Demodulation

3.7 Vestigial Sideband Modulation and Demodulation

3.8 Baseband Representation of Modulated Waves and Band-Pass Filters

3.9 Theme Examples

3.10 Summary and Discussion

Chapter 4 Angle Modulation

4.1 Basic Definitions

4.2 Properties of Angle-Modulated Waves

4.3 Relationship Between PM and FM Waves

4.4 Narrow-Band Frequency Modulation

4.5 Wide-Band Frequency Modulation

4.6 Transmission Bandwidth of FM Waves

4.7 Generation of FM Waves

4.8 Demodulation of FM Signals

4.9 Theme Example: FM Stereo Multiplexing and FM Cellular Telephones

4.10 Summary and Discussion

Chapter 5 Pulse Modulation: Transition from Analog to Digital Communications

5.1 Sampling Process

5.2 Pulse-Amplitude Modulation

5.3 Pulse-Position Modulation

5.4 Completing the Transition from Analog to Digital

5.5 Quantization Process

5.6 Pulse-Code Modulation

5.7 Delta Modulation

5.8 Differential Pulse-Code Modulation

5.9 Line Codes

5.10 Theme Examples

5.11 Summary and Discussion

Chapter 6 Baseband Data Transmission

6.1 Baseband Transmission of Digital Data

6.2 The Intersymbol Interference Problem

6.3 The Nyquist Channel

6.4 Raised-Cosine Pulse Spectrum

6.5 Baseband Transmission of M-ary Data

6.6 The Eye Pattern

6.7 Computer Experiment: Eye Diagrams for Binary and Quaternary Systems

6.8 Theme Example: Equalization

6.9 Summary and Discussion

Chapter 7 Digital Band-Pass Modulation Techniques

7.1 Some Preliminaries

7.2 Geometric Representation of Signals

7.3 Gram-Schmidt Orthogonalization Procedure

7.4 Binary Amplitude-Shift Keying

7.5 Phase-Shift Keying

7.6 Frequency-Shift Keying

7.7 Summary of Three Binary Signaling Schemes

7.8 Noncoherent Digital Modulation Schemes

7.9 M-ary Digital Modulation Schemes

7.10 Mapping of Digitally Modulated Waveforms onto Constellations of Signal Points

7.11 Theme Examples

7.12 Summary and Discussion

Chapter 8 Probability, Random Processes, and Noise

8.1 Probability and Random Variables

8.2 Expectation

8.3 Transformation of Random Variables

8.4 Gaussian Random Variables

8.5 The Central Limit Theorem

8.6 Random Processes

8.7 Correlation of Random Processes

8.8 Spectra of Random Signals

8.9 Gaussian Processes

8.10 White Noise

8.11 Narrowband Noise

8.12 Summary and Discussion

Chapter 9 Noise in Analog Communications

9.1 Noise in Communication Systems

9.2 Signal-to-Noise Ratios

9.3 Band-Pass Receiver Structures

9.4 Noise in DSB-SC Receivers

9.5 Noise in AM Receivers Using Envelope Detection

9.6 Noise in SSB Receivers

9.7 Noise in FM Receivers

9.8 FM Pre-emphasis and De-emphasis

9.9 Summary and Discussion

Chapter 10 Noise in Digital Communications

10.1 Bit Error Rate

10.2 Detection of a Single Pulse in Noise

10.3 Optimum Receivers Using Coherent Detection

10.4 Optimum Detection of Binary PAM in Noise

10.5 Optimum Detection of BPSK

10.6 Detection of QPSK and QAM in Noise

10.7 Optimum Detection of Binary FSK

10.8 Differential Detection in Noise

10.9 Summary of Digital Performance

10.10 Error Detection and Correction

10.11 Summary and Discussion

Chapter 11 System and Noise Calculations

11.1 Electrical Noise

11.2 Noise Figure

11.3 Equivalent Noise Temperature

11.4 Cascade Connection of Two-Port Networks

11.5 Free-Space Link Calculations

11.6 Terrestrial Mobile Radio

11.7 Summary and Discussion

Additional Problems

Advanced Problems

Multiple Choice Questions

Answers to Drill Problems

Answers to Multiple Choice Questions

Appendix 1 Power Ratios and Decibel

Appendix 2 Bessel Functions

Appendix 3 The Q-function and Its Relationship to the Error Function

Appendix 4 Schwarz's Inequality

Appendix 5 Mathematical Tables

Appendix 6 MATLAB Scripts for Computer Experiments to Problems in Chapters 6–10
