

Fundamentals of Data Science Using Python and R

By [Chantal D. Larose](#), [Daniel T. Larose](#), [Shaukat Ali Shahee](#)

Paperback

9789363860759

₹999.00

Pages: 276

Description

Fundamentals of Data Science Using Python and R is an essential resource for students and professionals eager to explore data science with Python and R, two of the most popular open-source tools. The book covers the entire Data Science Methodology—from problem understanding to model deployment—and has been widely praised for its clarity and practicality. This adapted edition retains the core structure of the original, while enhancing end-of-chapter questions to suit the Indian academic environment. New examples and exercises focus on India-specific datasets, encouraging students to apply their knowledge to real-world scenarios relevant to India's socio-economic and technological contexts. This hands-on approach ensures students gain both theoretical understanding and practical skills for a data-driven world.

About the Author

Chantal D. Larose, Daniel T. Larose, Shaukat Ali Shahee

Chantal D. Larose

Chantal D. Larose earned her PhD in Statistics from the University of Connecticut in 2015, focusing her dissertation on Model-Based Clustering of Incomplete Data. As an Assistant Professor of Decision Science at SUNY New Paltz, she played a pivotal role in developing the Bachelor of Science in Business Analytics program. Currently, she serves as an Assistant Professor of Statistics and Data Science at Eastern Connecticut State University, contributing to the design of the Mathematical Sciences Department's data science curriculum.

Daniel T. Larose

Daniel T. Larose completed his PhD in Statistics from the University of Connecticut in 1996, with his dissertation titled Bayesian Approaches to Meta-Analysis. A Professor of Statistics and Data Science at Central Connecticut State University, he pioneered the world's first online Master of Science in Data Mining in 2001. As the author or coauthor of 12 textbooks, Daniel also directs the online Master of Data Science program at CCSU and operates a consulting business.

Shaukat Ali Shahee

Shaukat Ali Shahee received his PhD from the SJM School of Management at the Indian Institute of Technology Bombay, where his research addressed challenges in analyzing imbalanced data with diverse intrinsic characteristics. His work has been featured in renowned journals such as International Journal of Artificial Intelligence and Soft Computing, Applied Intelligence, and Data Mining and Knowledge Discovery, as well as in the prestigious Advances in Data Mining book series. With 5.5 years of industry experience, he has served as a Quantitative Research Analyst at AlphaCrest Capital Management, a Deputy Manager at Bank of Maharashtra, and a Research Engineer at the IIT Bombay CSE department.

Table of Contents

PREFACE TO THE ADAPTED EDITION

PREFACE TO THE US EDITION

ABOUT THE AUTHORS

CHAPTER 1 INTRODUCTION TO DATA SCIENCE

1.1 Why Data Science?

1.2 What Is Data Science?

1.3 The Data Science Methodology

1.4 Data Science Tasks

1.4.1 Description

1.4.2 Estimation

1.4.3 Classification

1.4.4 Clustering

1.4.5 Prediction

1.4.6 Association

Exercises

CHAPTER 2 THE BASICS OF PYTHON AND R

2.1 Downloading Python

2.2 Basics of Coding in Python

2.2.1 Using Comments in Python

2.2.2 Executing Commands in Python

2.2.3 Importing Packages in Python

2.2.4 Getting Data into Python

2.2.5 Saving Output in Python

2.2.6 Accessing Records and Variables in Python

2.2.7 Setting Up Graphics in Python

2.3 Downloading R and Rstudio

2.4 Basics of Coding in R

2.4.1 Using Comments in R

2.4.2 Executing Commands in R

2.4.3 Importing Packages in R

2.4.4 Getting Data into R

2.4.5 Saving Output in R

2.4.6 Accessing Records and Variables in R

References

Exercises

CHAPTER 3 DATA PREPARATION

- 3.1 The Bank Marketing Data Set
- 3.2 The Problem Understanding Phase
 - 3.2.1 Clearly Enunciate the Project Objectives
 - 3.2.2 Translate These Objectives into a Data Science Problem
- 3.3 Data Preparation Phase
- 3.4 Adding an Index Field
 - 3.4.1 How to Add an Index Field Using Python
 - 3.4.2 How to Add an Index Field Using R
- 3.5 Changing Misleading Field Values
 - 3.5.1 How to Change Misleading Field Values Using Python
 - 3.5.2 How to Change Misleading Field Values Using R
- 3.6 Reexpression of Categorical Data as Numeric
 - 3.6.1 How to Reexpress Categorical Field Values Using Python
 - 3.6.2 How to Reexpress Categorical Field Values Using R
- 3.7 Standardizing the Numeric Fields
 - 3.7.1 How to Standardize Numeric Fields Using Python
 - 3.7.2 How to Standardize Numeric Fields Using R
- 3.8 Identifying Outliers
 - 3.8.1 How to Identify Outliers Using Python
 - 3.8.2 How to Identify Outliers Using R

References

Exercises 45

CHAPTER 4 EXPLORATORY DATA ANALYSIS

- 4.1 Eda Versus HT
- 4.2 Bar Graphs with Response Overlay
 - 4.2.1 How to Construct a Bar Graph with Overlay Using Python
 - 4.2.2 How to Construct a Bar Graph with Overlay Using R
- 4.3 Contingency Tables
 - 4.3.1 How to Construct Contingency Tables Using Python
 - 4.3.2 How to Construct Contingency Tables Using R
- 4.4 Histograms with Response Overlay
 - 4.4.1 How to Construct Histograms with Overlay Using Python
 - 4.4.2 How to Construct Histograms with Overlay Using R
- 4.5 Binning Based on Predictive Value
 - 4.5.1 How to Perform Binning Based on Predictive Value Using Python
 - 4.5.2 How to Perform Binning Based on Predictive Value Using R

References

Exercises

CHAPTER 5 PREPARING TO MODEL THE DATA

5.1 The Story So Far

5.2 Partitioning the Data

5.2.1 How to Partition the Data in Python

5.2.2 How to Partition the Data in R

5.3 Validating Your Partition

5.4 Balancing the Training Data Set

5.4.1 How to Balance the Training Data Set in Python

5.4.2 How to Balance the Training Data Set in R

5.5 Establishing Baseline Model Performance

References

Exercises

CHAPTER 6 DECISION TREES

6.1 Introduction to Decision Trees

6.2 Classification and Regression Trees

6.2.1 How to Build CART Decision Trees Using Python

6.2.2 How to Build CART Decision Trees Using R

6.3 The C5.0 Algorithm for Building Decision Trees

6.3.1 How to Build C5.0 Decision Trees Using Python

6.3.2 How to Build C5.0 Decision Trees Using R

6.4 Random Forests

6.4.1 How to Build Random Forests in Python

6.4.2 How to Build Random Forests in R

References

Exercises

CHAPTER 7 MODEL EVALUATION

7.1 Introduction to Model Evaluation

7.2 Classification Evaluation Measures

7.3 Sensitivity and Specificity

7.4 Precision, Recall, and F β Scores

7.5 Method for Model Evaluation

7.6 An Application of Model Evaluation

7.6.1 How to Perform Model Evaluation Using R

7.7 Accounting for Unequal Error Costs

7.7.1 Accounting for Unequal Error Costs Using R

7.8 Comparing Models with and Without Unequal Error Costs

7.9 Data-Driven Error Costs

Exercises

CHAPTER 8 NAÏVE BAYES CLASSIFICATION

8.1 Introduction to Naïve Bayes

8.2 Bayes Theorem

8.3 Maximum a Posteriori Hypothesis

8.4 Class Conditional Independence

8.5 Application of Naïve Bayes Classification

8.5.1 Naïve Bayes in Python

8.5.2 Naïve Bayes in R

References

Exercises

CHAPTER 9 NEURAL NETWORKS

9.1 Introduction to Neural Networks

9.2 The Neural Network Structure

9.3 Connection Weights and the Combination Function

9.4 The Sigmoid Activation Function

9.5 Backpropagation

9.6 An Application of a Neural Network Model

9.7 Interpreting the Weights in a Neural Network Model

9.8 How to Use Neural Networks in R

9.9 How to Use Neural Networks in Python

References

Exercises

CHAPTER 10 CLUSTERING

10.1 What Is Clustering?

10.2 Introduction to the k-Means Clustering Algorithm

10.3 An Application of k-Means Clustering

10.4 Cluster Validation

10.5 How to Perform k-Means Clustering Using Python

10.5.1 k-Means Python Example Using Sklearn

10.6 How to Perform k-Means Clustering Using R

Exercises

CHAPTER 11 REGRESSION MODELING

11.1 The Estimation Task

11.2 Descriptive Regression Modeling

11.3 An Application of Multiple Regression Modeling

11.4 How to Perform Multiple Regression Modeling Using Python

11.5 How to Perform Multiple Regression Modeling Using Sklearn Python

11.6 How to Perform Multiple Regression Modeling Using R

11.7 Model Evaluation for Estimation

11.7.1 How to Perform Stepwise Regression Using Python

11.7.2 How to Perform Estimation Model Evaluation Using Python

11.7.3 How to Perform Estimation Model Evaluation Using R

11.8 Stepwise Regression

11.8.1 How to Perform Stepwise Regression Using R

11.9 Baseline Models for Regression

References

Exercises

CHAPTER 12 DIMENSION REDUCTION

12.1 The Need for Dimension Reduction

12.2 Multicollinearity

12.3 Identifying Multicollinearity Using Variance Inflation Factors

12.3.1 How to Identify Multicollinearity Using Python

12.3.2 How to Identify Multicollinearity in R

12.4 Principal Components Analysis

12.5 An Application of Principal Components Analysis

12.6 How Many Components Should We Extract?

12.6.1 The Eigenvalue Criterion

12.6.2 The Proportion of Variance Explained Criterion

12.7 Performing PCA with $k = 4$

12.8 Validation of the Principal Components

12.9 How to Perform Principal Components Analysis Using Python

12.10 How to Perform Principal Components Analysis Using R

12.11 When Is Multicollinearity Not a Problem?

References

Exercises

CHAPTER 13 GENERALIZED LINEAR MODELS

13.1 An Overview of General Linear Models

13.2 Linear Regression As a General Linear Model

13.3 Logistic Regression As a General Linear Model

13.4 An Application of Logistic Regression Modeling

13.4.1 How to Perform Logistic Regression Using Python

13.4.2 How to Perform Logistic Regression Using R

13.5 Poisson Regression

13.6 An Application of Poisson Regression Modeling

13.6.1 How to Perform Poisson Regression Using Python

13.6.2 How to Perform Poisson Regression Using R

Reference

Exercises

CHAPTER 14 ASSOCIATION RULES

14.1 Introduction to Association Rules

14.2 A Simple Example of Association Rule Mining

14.3 Support, Confidence, and Lift

14.4 Mining Association Rules

14.4.1 How to Mine Association Rules Using R

14.5 Confirming Our Metrics

14.6 The Confidence Difference Criterion

14.6.1 How to Apply the Confidence Difference Criterion Using R

14.7 The Confidence Quotient Criterion

14.7.1 How to Apply the Confidence Quotient Criterion Using R

Valediction

Exercises

APPENDIX DATA SUMMARIZATION AND VISUALIZATION

Part 1 Summarization 1: Building Blocks of Data Analysis

Part 2 Visualization: Graphs and Tables for Summarizing and Organizing Data

A.1 Categorical Variables

A.2 Quantitative Variables

Part 3 Summarization 2: Measures of Center, Variability, and Position

Part 4 Summarization and Visualization of Bivariate Relationships
